

Bring Connected Learning A Step Closer With Consistent High Bandwidth Campus-Wide.

Technology advances have **changed the face of education** as well. Bandwidth-heavy devices and applications are moving into the classroom to enhance the learning experience. Campus networks are coming under **increasing strain**.

Educational institutions need to cater to a savvy, hyper-connected student population, many of whom use **multiple web-ready devices** in their course of study. Peak-traffic periods, such as online exams, also demand **guaranteed bandwidth** for smooth operation.

With the **ANTlabs SG 4**, a one-stop gateway for managing large-venue public access networks, schools and universities can **optimize bandwidth** for multimedia classrooms and on-campus roaming. **Multiple authentication methods** such as LDAP, SMS, and more are integrated for smooth student logins.

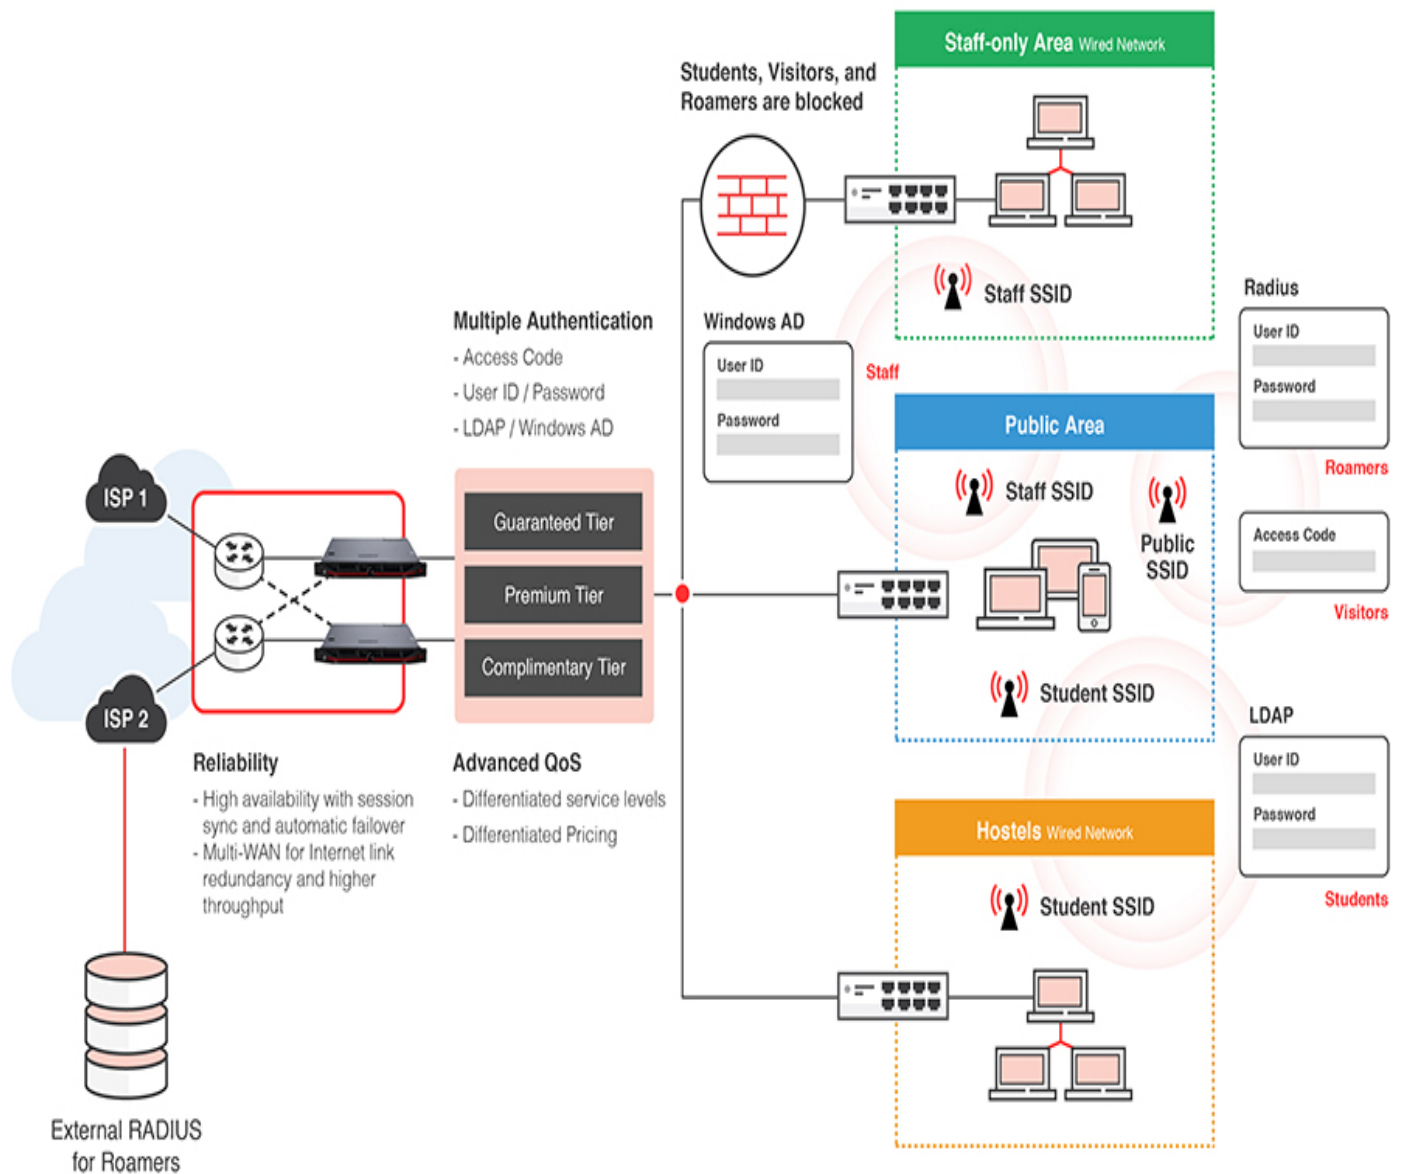

And with the SG 4's dual WAN link load-balancing, the network is better prepared to **cater to usage spikes** – without the need to purchase a dedicated load balancer. Multi-tier QoS (including a **Guaranteed Bandwidth** option) further ensures top performance during critical periods.

ANTlabs

Connectivity **Made Easy**

The **ANTlabs SG 4** gives schools and universities the power to **maximise their networks**, and **stay up to speed** in an evolving education landscape.
