

## HIGH DENSITY ACCESS POINTS

### WHAT MAKES XIRRUS DIFFERENT?

Xirrus Xtreme Density (XD) Wi-Fi are the highest density Wi-Fi Access Points (APs) that deliver the fastest Wi-Fi available in the industry. Xirrus XD4 is the only 4-radio all 802.11ac AP available in the market, supports four times more users, reduces the amount of equipment deployed by 75 percent and decreases total cost of ownership by up to 50 percent versus competing products.

### UNPARALLELED PERFORMANCE

The XD4 integrates four 802.11ac capable radios and optimizes performance with automated RF configuration. The XD platform, paired with Xirrus' award winning XMS cloud management system, delivers groundbreaking performance and simplicity.

### BEST RETURN ON INVESTMENT

TurboXpress, featured on all XD Aps, allows administrators to configure every radio on the AP for high-speed 802.11ac operation, with the click of a mouse, providing an instant performance boost of up to 6x. Xirrus XD is the only solution in the industry that can add wireless capacity instantaneously without adding AP's

### AT A GLANCE

- 4-radio all 802.11ac AP delivers highest density
- Supports four times more users
- Reduces equipment deployed by 75 percent
- Decreases total cost of ownership up to 50%

## HIGH DENSITY ACCESS POINTS

### POWERFUL SERVICES

Stream-line IT operations with the Xirrus Management System (XMS), hosted either in the cloud or on-premise. XD Wi-Fi integrates a set of powerful network services to optimize performance and ensure enterprise-grade wireless reliability including:

- **acXpress:** Separate high-speed 802.11ac from low-speed Wi-Fi clients to optimize performance for all clients and ensure the best user experience.
- **Application Control:** Ensure predictable Wi-Fi traffic performance and enforce policies for more than 1400 business-critical applications through integrated application visibility and control directly on the AP.

### MOST RELIABLE WI-FI

XD Wi-Fi integrates the controller function into every AP, reducing system costs and improving overall system reliability. With most traditional wireless solutions, a central controller oversees the operation and maintenance of tens to hundreds of APs at once. In these networks, a single controller failure will impact the operation of all connected APs and their users.

Product Series	Description
XD4	High Density Access Point consisting of four 802.11ac radios and integrated controller

### WANT TO TRY XIRRUS FOR FREE?

Go to our [Free Trial page](#) or [email our sales department](#) and we'll answer your questions, deliver a free trial Xirrus Access Point and XMS-Cloud/EasyPass, or dedicate a Wi-Fi expert to your guest and BYOD planning needs.

Learn how Xirrus provides the "Best Wi-Fi on the Planet" and hear from other customers around the world who deliver the fastest most reliable Wi-Fi with Xirrus solutions. Visit our [customer stories page](#).

### About Xirrus

Xirrus provides the only enterprise Wi-Fi networks specifically designed for the real-time demands of an all-wireless world. Xirrus' cloud managed Wi-Fi solutions are scalable, future proof, easy to use and provide application control, which makes Xirrus the obvious choice for small, medium, or large-scale Wi-Fi networks. Xirrus' unique network architecture can scale to double and quadruple the number of users, without performance impact or the need for additional wiring and access points. And it's designed to evolve with the changes in Wi-Fi technology and standards, so you won't need to replace your Xirrus network, even after a decade of use. Xirrus solutions are deployed in 4000 networks worldwide, and we are proud to call some of the biggest companies on the planet our clients.
